# **ECONOMY PANEL-CUT 2000**

Automatic Length Cut & Slitting machine

## ***AUTOMATICALLY CUT LENGTHS*** ***Slit to width Remove selvedge***

This work-station is all you need to cut accurate lengths in manageable batches. Precise length measurement is set electronically so that fabric is fed to length then cross-cut before being vertically stacked or falling into a bin.

Vertical slitters can be added to slit the fabric vertically as it is fed. This means several cuts across the web can be made, including trimming off selvedge.

The main benefits of using this machine to cut & slit panels are:

- Save space with small footprint, save time and de-skill panel cutting
- Increase accuracy & reduce errors
- Consistent production with one operator to load & unload
- Possibility to cut 2 rolls at once

Specifications: 220vac 1ph, 6amp standard , Centre pole loading max 50kg per roll, Length +/- 2.0mm depending on fabric, Width +/-1mm provided input roll straight, Footprint for 2.00mt / 78ins width fabric: w 292cm, d 102cm, ht 175cm, Speed example: 150cm length = 7 seconds cycle. Pre-hemmed can be cut but additional guidance may be required.
